

Fixed Gallonage Nozzle System and Nozzle Tips

- Kochek would like to introduce our “Fixed Gallonage Nozzle System NZ036” and our “Fixed Gallonage Tips NZ036 -15, 25, 35, 55”. These constant flow nozzle tips utilize Kochek’s exclusive “Multi-Mist” technology and conical turbulence fire technology.

With advanced flow censoring the accuracy of GPM output at 100 PSI is absolute! Created out of demand for “Multi-Mist’s” superior spray patterns and Kochek’s “Tournament Nozzle” misting abilities, these tips were designed for the Superintendent that demands consistent conditions on all their putting surfaces.

The Kochek “Fixed Tips” with full flow misting will output flow rates of 15, 25, 35 and 55 GPM. The System (NZ036) is sold as a kit with interchangeable tips, including a valve and adapter for versatility or the tip and valve body are sold individually for the Superintendent or Turf Manager that knows what flow rate is correct for their facility.
